

I need a professional DPF cleaning service

For :

_____ trucks

_____ buses & coaches

_____ vans

_____ non road mobile machinery / plant

(Please insert the number of vehicles.)

Please put me in touch with a provider of professional DPF cleaning services.

The **PURi**clean cleaning system

Is your filter system still delivering optimum performance?

- Is the tightening of the system on the vehicle unstable?
- Does the alarm continually sound?
- Is the vehicle sluggish to drive?
- Have you noticed an increase in fuel consumption?
- Is the isolation of the filter system inadequate?

About **PURi**tech

PURitech specialise in the development of technologies for diesel emission control and has been a market leader for over a decade. Emission control technologies include systems to effectively reduce emissions of soot, NO_x and NO₂. PURiClean cleaning technology delivers effective cleaning performance and diagnostic tools to prove DPF cleanliness and integrity for retrofit and for series-applications. **PURi**tech have many OEM homologations and retrofit approvals all over World. **PURi**tech is the exclusive retrofit partner of Daimler AG for Mercedes-Benz duty vehicles in Europe. You can rely on the judgment of a leading manufacturer.

Clean Air for Generations

Do you notice an increase in fuel consumption?

Your Diesel Particulate Filter might need to be properly cleaned!

www.puritech.de

Pay attention!

Failure to ensure that your diesel particulate filter (DPF) has been properly cleaned can lead to some large bills:

- Backpressure increase
- Fuel consumption increase
- Potential damage to the DPF
- Filter capacity decrease – this will lead to a reduction in the service interval. Every subsequent poor quality clean will further reduce the service interval.
- The filter can be damaged by inappropriate, aggressive cleaning methods.

A damaged and a dirty filter.

The solution: *PURi*clean

Advantages of this professional cleaning technique:

- Uses only gentle high speed air
- No damage to the filter
- Complete removal of the stored ash and the plugs at the end of each channel
- Intervals in between cleaning events remains the same
- Ash storage capacity is reset to 'as new' state
- No increase in fuel consumption
- Guaranteed certified cleaning performance
- Already certified by many leading automobile manufacturers
- The filter can last as long as the vehicle

A cleaned filter – just like new.
